

- ☐ Observation / Good Catch ☐ Warranty Event
☐ Rework Event ☐ Defect Claim

Event / Exposure Analysis Worksheet

- ☐ Property Damage ☐ SIFp Medical Treatment
☐ SIFp Near Miss ☐ SIF Actual

Site / Location: _____ Event Date: _____ Participants: _____

What Task(s) Were Being Performed?

What Happened?

How Is This Work Normally Done?

Instructions: Review team should collaborate and reference all sources of information (records, interviews, etc.) Talk to employees to understand if contributing factors identified are typical or unusual. Find out what surprised them. Check all challenges likely present "on the front lines" (at the crew / employee level).

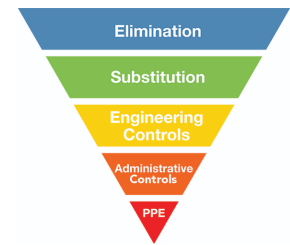

CHANGE MANAGEMENT	INDIVIDUAL FACTORS	PLANNING / PREPAREDNESS	PROCESS / PROCEDURE	SCHEDULING / CAPACITY	TRAINING / EXPERIENCE	WORK ENVIRONMENT	CONTROLS
What changed? What was atypical?	What was the employee dealing with?	Were they fully prepared?	Were clear guidelines provided for the work?	Were they trying to save time? Spread too thin?	Was training and tenure ideal?	What was going on around them?	What control break downs contributed?
1. Rework 2. Breakdown or Emergency Maintenance 3. Change in Personnel (Crew or Supervision) 4. Change in Role or Responsibility 5. Change in Task or Method 6. Change in Scope, Design, or Materials 7. Interruption or Unplanned Event Other:	8. Distraction or Mind Not on Task 9. Fit for Duty – Drugs or Alcohol 10. Fit for Duty – Physical or Mental Wellness 11. Discomfort With Intervention / Stop Work Other:	12. Communication Breakdown – Language Barrier 13. Communication Breakdown – Unclear Work Instructions 14. Pre-Planning – Not Completed, or Not Completed in Work Area 15. Pre-Planning – SIF-Risk / Quality Exposures Not Addressed 16. Pre-Planning – Work Changes Not Addressed 17. Tools / Equipment – Availability, Selection, or Condition 18. Unfamiliar or Non-Routine Activity Other:	19. Lack of Authorization or Permit-Required Work Failure 20. Process / Procedure – Not Implemented or Available in Field 21. Process / Procedure – Inadequate, Unclear, or Not Workable 22. Repetitive Work; Monotony Other:	23. Improper Work Sequencing or Trade Stacking 24. In a Hurry / Production Pressure 25. Lack of Oversight for Significant Activity 26. Non-Conventional Work Shift 27. Significant Overtime (> Typical Working Hours) 28. Supervision – Over Capacity or Not Present 29. Working Alone or Inadequate Crew Size for Activity Other:	30. Crew Member – Lack of Time in Job or On-Site (Tenure) 31. Crew Member – Lack of Training or Understanding for Task at Hand 32. Life-Saving Commitments / Key Rules Not Understood 33. Supervision – Lack of Training or Understanding 34. Supervision – Tenure (Less Than One Year in Position) 35. Inspector or Mgr. – Lack of Training or Experience Other:	36. Adverse Weather – High Winds, Lightning, Ice, Fog, etc. 37. Ambient Factors – Temperature, Humidity, Lighting, Noise, Air Quality 38. Confusing Displays and Controls 39. Work Area – New or Not Evaluated / Inspected 40. Work Area – Congested Workspace / Crowding 41. Limited Access for Inspection Other:	42. Limited Margin for Error 43. Line of Fire Uncontrolled 44. Lack of Visual Warning and / or Control Barrier 45. Motor Vehicle / Equipment – Condition and Maintenance List Other Hazard or QA/QC Controls Missing or Eroded: 46. 47.

Note: Many contributing factors listed throughout can relate to change conditions

Look for the specific controls that address the activity, or the source of harm / energy

Deep Dive & Corrective Actions

Instructions: Looking at factors identified on page 1 (and any additional factors present), list the contributing factors, that if removed – could have prevented, or reduced the likelihood or severity of the event. Working from left to right, identify what led to the contributor arising and persisting (not being addressed). Ask 'Why?' until answers stop being useful. Identify corrective actions for each factor that reduce the likelihood, or the consequences, of recurrence. Consider the hierarchy of controls (at right). List due dates and responsible persons.

Scan if disciplinary action is being considered

Contributing Factors	Why Did This Occur? 1 st Why	Why Did This Occur? 2 nd Why	Why Did This Occur? 3 rd Why	Corrective Actions

Continue on a separate sheet, if needed. Try sticky notes or a whiteboard to draft the Deep Dive section. Humans, work processes, and their interactions can get messy!

Common Root Causes / Constraints to Consider: Workforce challenges, design challenges and changes, schedule issues, financial pressures & incentives, budget constraints, client expectations, training quality or investment, lack of enforcement, goal conflicts, unfamiliar scope / project type, equipment & tool investments, and culture (crew, project, division, company).

Were we GOOD, or were we LUCKY? (Did redundant / overlapping controls work as intended?) _____
