

WRAP-UP PROJECT DECISION MATRIX

Single Project

Project Size	Type of Wrap-up Option(s)	State*	Motivation (Risk Management and/or Financial)	Financial Impact
< \$25M	GL Only	All States, except NY; Some States More Problematic for Residential Projects	Risk Management	Wrap- up Cost probably greater than Traditional Coverage, but better insurance product
\$25M - \$100M	GL Only; Maybe Bi-Line or WC Only closer to \$100M	All States, except NY; Some States More Problematic for Residential Projects	Risk Management + Financial (Potential Savings from Claims Experience)	Closer to \$100M, Wrap-up Cost could equal Traditional Coverage
\$100M - \$500M	Bi-Line, WC Only, or GL Only	All States, except NY; Some States More Problematic for Residential Projects	Risk Management + Financial (Potential Savings on "Buy" + Some Potential Savings from Claims Experience)	Wrap-up Cost probably less than or equal to Traditional Coverage
> \$500M	Bi-Line, WC Only, or GL Only	All States, maybe NY Bi-Line or WC Only	Risk Management + Financial (Savings on "Buy" + Greater Potential Savings from Claims Experience)	Enough "economies of scale" where Wrap-up Cost is less than or equal to Traditional Coverage

Other Considerations:

Term of Project, typically 48-60 Months Max Term
 Type of Project (Residential or Commercial)
