

Summary

- Provides early risk detection and key network insights for predictive product liability assessment, client prospecting, and supply chain and business interruption analysis
- Serves industry leading product liability, property, and CBI Life Science insurers as well as drug and device firms
- Leverages our patented, peer-reviewed technology for rapid, scalable real-world, structured and unstructured data analysis and visualization

Overview

Pharm3r uses real-world data to generate differentiated insights across the entire medical product lifecycle.

Founded in 2011, Pharm3r is the premier analytics provider for the life science risk management sector. Some of our clients include Sompco, Liberty Mutual, LifeScience Risk, Chubb, CNA, Marsh, as well as individual medical product, and legal firms. We improve our clients' outcomes by informing critical financial and strategic decisions.

Pharm3r provides insights into medical device and drug companies, products, facilities, supply chains, recalls and clinical trials. Our products are used for prospecting, evaluating product outcomes, identifying supply chain vulnerabilities, and balancing portfolio risk.

Pharm3r's life science software product suite consists of:

Pharm3rProperty™- property and supply chain vulnerability assessment

PandoraPlus™- medical product liability

Pharm3rProtect™-recalls and workflow management

ClinicalTrialProspector™- clinical trial benchmarking and sponsor locator

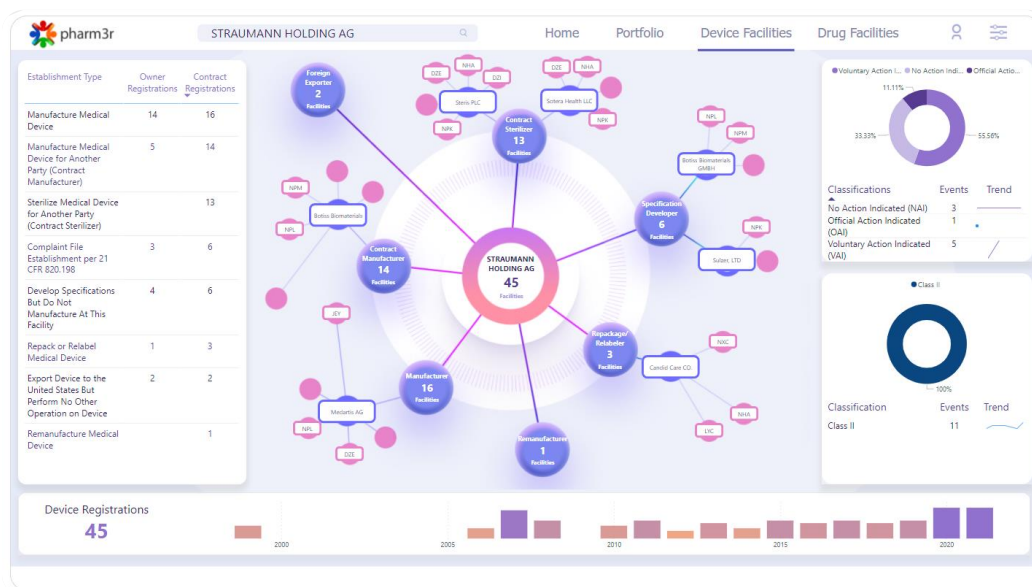

We also provide objective data to the healthcare industry for competitive intelligence, strategic planning, M&A support, product positioning, and value-based medical care.

Pharm3r's patented technology allows for flexible and highly scalable processing of diverse, complex data. It facilitates ingesting, cleaning, and aggregating data on hundreds of thousands of companies, facilities, clinical trials, and millions of products. We integrate these disparate datasets and extract both structured and unstructured information.

Entities are assigned risk and quality scores based on our predictive models. We consider litigation, reputation, and business interruption risk as critical outcomes. We can also incorporate risk metrics driven by our clients into our algorithms.

The accuracy of Pharm3r's output has been validated in peer-reviewed journals. Visualizations help clients identify and understand entity relationships and burgeoning adverse issues. The resulting synthesized database populates our cloud-based SaaS products and is key to our custom consulting services.

Pharm3r is based in New York, with a branch office in Halifax, Nova Scotia. It is GDPR- and HIPAA-compliant.
